

AXON MKII UPDATE

Ensure the compatibility before purchasing the product!

As it is generally known, TerraTec Producer has taken over the AXON technology and developed it further. Thus the now available AXON MK II Update is not compatible with all other AXON AX 100 models developed and distributed by BlueChip. In contrast, all AXON AX 100 developed and distributed by TerraTec Producer are fully compatible.

Before purchasing the product, please ensure what version of the AXON AX 100 you have. The third series, recognisable by the display contrast control beside the mono level control, is fully compatible. In the following, you can find an overview of the different series:

- **A:** BlueChip series without display contrast control – **not upgradeable!**
- **B:** Second BlueChip series with display contrast control above the mono level control – **not upgradeable!**
- **C:** Third BlueChip series with display contrast control beside the mono level control – **upgradeable!**
