

Input Device

Show your opponents your talons!

The hassle of looking for keys, nerve-wracking key clatter and acrobatic hand-splits on the keyboard: that was yesterday! The Mystify Claw lets you toss your keyboard aside. From now on, you have convenient control in your left hand, literally mastering tricky situations left-handed. All this with significantly higher playing speed and faster reaction times than when you used to use common input devices!

The power is just a fingertip away !

The Mystify Claw is the perfect replacement for your keyboard, and the ideal input device for, for example, your 3D first-person shooter games. When before you had to press multiple keys at the same time, you can now consolidate key sequences conveniently. Ten ergonomically arranged keys make this possible. Each can be programmed any way you want using the accompanying software. This makes several moves possible simultaneously. These shortcuts give you intuitive control without a second thought, keeping your mind free for your games. And how does the connection work? Quite simply via plug&play using a free USB port.

With preset configurations designed for the most popular games

So, which functions do I actually define on the Mystify Claw? And how do I arrange the function sets optimally on the keys? Don't worry, we've already tested that for you! We did so using many of the action games currently in demand. We've included the best game presets for you as easy-to-install configurations on the accompanying CD. Just put in the disk and get started!

Input Device

Technical Details

- Up to 100 programmable, consecutive commands per button
