- 3 x USB 2.0 and SD/MMC card slot
- External connector for SATA hard drives
- Supports all common audio and video formats
- Simple operation via an multilingual menu
- Convenient slideshow function
- Extensive accessories including HDMI cable and remote control

The NOXON M740 is the Full HD Multimedia Player for your TV setup. Play music, video and picture files on your television, Hi-Fi system or AV receiver. To do so, you don't even need to make CDs or DVDs. The NOXON M740 is connected to your router and accesses your media library in the network. Sit back and select your favorite movie, the slideshow from your last holiday or the new album from your favorite band on the television. Pin-sharp pictures and an excellent listening experience – also in multi-channel sound, of course –bring you an indescribable cinema feel in your living room.

And it's really easy. First, connect the NOXON M740 to the Hi-Fi amplifier or the AV receiver. For this purpose there are analogue and a digital outputs available, suitable for any system, and of course including HDMI. Then, the configuration wizard helps you connect to the network, whether it is wired (LAN) or wireless (WLAN - to access to a wireless network an optional available WLAN stick is necessary). If your WLAN has security against unauthorised access, the key is entered conveniently during the installation. Now, you already have secure access to your multimedia files. It makes no difference what room your computer or network hard drive is in.

If your friends want to show you some digital pictures of the weekend you spent together in Paris, they can also be viewed easily on the TV set. For this purpose, the NOXON M740 offers three USB 2.0 ports where you can connect memory sticks and external hard drives. There is also a slot for SD/MMC cards, used by most digital cameras. In addition, a SATA hard drive can be loaded in the slot frame on the rear side. SATA hard drives can also be connected just as easily via the external port.

The stylish 19" housing made of high-quality brushed aluminum integrates excellently into any existing Hi-Fi system. And with the highly functional remote control, navigating through the media library is as easy as child's play.

# NOXON M740

## Features

- FULL HD Network Multimedia Player
- Plays multimedia files from the network and from external storage media
- Digital output via HDMI and S/PDIF
- Analogue output via cinch (RCA)
- Easy integration into existing systems
