

CINERGY 2400i DT MCE Edition

Watch one program while recording another

Two DVB-T tuners on one card means ultimate TV viewing comfort on your PC: finally you can record one program while watching another on a different channel at the same time.

Use your existing antenna

As it has in the past, the Cinergy 2400i DT MCE receives digital terrestrial television through an antenna, and because the signal is distributed to the two tuners internally, a single connecting cable is all you need. The card is inserted into the PCI Express port of your PC, which also makes it future-proof for your next computer. In conjunction with Windows XP Media Center Edition, you can enjoy all the benefits of the new TV technology.

Time-shifting TV programs

If you are interrupted for any reason during a program, you can use the time-shifting function to restart it later exactly where you left off, without missing a single scene. You can also use the Cinergy 2400i DT MCE as a video recorder for recording digital terrestrial TV programs with timer and full MPEG-2 support.

Technical Details

Features

- Dual reception of two independent stations
- Record while Play
- Digital Video Broadcasting via antenna (DVB-T)
- Lossless TV recording
- TimeShifting
- Electronic Program Guide

Software

- BDA drivers for Windows XP or Windows XP Media Center Edition
