

## ReceiverSystem TerraTValue

TerraTec's TV card TerraTValue offers you full service at a low price. As with TValue Radio, TerraTValue lets you watch television comfortably on your computer and investigate the world of teletext. As with its older siblings, TerraTValue lets you watch television comfortably on your computer, investigate the world of teletext or flip through Internet pages, which Intel InterCast Viewer now allows you to receive over your television signal.

The 32-bit TV software excels through easy handling and a brilliant quality. Several viewing modes allow you to match the TV picture to your needs: the view modes 4:3, 16:9, a full-screen and a fully-adjustable mode. The mosaic offers you effective navigational help through the station jungle by giving you an overview of up to 100 channels simultaneously. Do you want to record anything? – Not a problem with the TerraTValue TV software. Shoot individual stillshots with the touch of a button, or record complete video sequences from a running TV program or from a connected VCR or video camera. To help you effectively reduce the overwhelming amount of data during video sequence recording, the TV software supports numerous compression processes, which can be used in real time. A further advantage is the Video Studio 3.0 video processing software which is available in the free trial version (functional 15 days, 30 effects instead of 107, limited video length of 30 seconds). Create effective scene transitions, elegantly integrate text passages or add the final polishing touches with the audio dubbing function using this software.

The 32-bit teletext software from TerraTValue opens up new aspects of information processing. Forget about long waiting periods – as soon as you choose a channel, all available teletext pages are loaded into a buffer storage and are ready at the touch of a button. Never type in page numbers again – simply move through the world of teletext with the click of a mouse. Find an interesting teletext page with a valuable financial tip or a new cooking recipe? – Then simply save it with the archive function or print it out for future reference. Because you can open the teletext software as often as you want and set it to different channels, the contents of different stations can be compared and evaluated – an indispensable function for soccer and stockmarket fans alike!

The video conferencing software NetMeeting 2.10 completes the package. Simply connect your video camera or webcam to TerraTValue and through your modem, with an Internet connection or direct dialing, you can immediately launch yourself into the world of video telephony. TerraTValue – Never before was quality so convenient!

## Key features – Hardware

- Brooktree 878 Chipset
- High quality Philips or Temic TV-Tuner
- SVHS and Video inputs
- No processor overload through PCI Bus-mastering

## Key features – 32-Bit TV Software
