VideoSystem

Cameo 400 AV mobile

Realtime Video Editing Solution

Become your own movie producer!

Transform your notebook into a mobile video editing studio

The Cameo 400 AV mobile lets you turn your notebook into a mobile studio for digitizing and editing your videos. Simply connect a video source such as a video recorder, DVD player, camcorder or sat receiver to your notebook via the PCMCIA interface. The Cameo 400 AV mobile directly converts video signals to MPEG 1/2 format, delivering high quality even at low bit rates. This does not result in undue CPU loads, as the MPEG compression is performed by the PCMCIA card itself.

You're the director!

In addition to the Cameo 400 AV mobile application for recording and playback in a variety of formats and resolutions, the package contains Ulead Video Studio 7 and MovieFactory 2 – video editing and DVD authoring applications that let you create true blockbusters out of your video material. A plugin lets you access the Cameo 400 AV mobile directly to store your motion pictures on the hard drive or even burn them onto a DVD on the fly. With VideoStudio 7 SE DVD, you can edit, trim and organize your video clips and add music, voice-overs and titles. Special effects, cross-fades and filters are available for the finishing touches. And the best thing about it: everything works in real time, without annoying processing delays.

That's the wrap?

Then onto a DVD or (S)VCD with it. Thanks to Ulead Movie Factory 2, you can even burn your work to DVD on the fly. You can also add professional menus to your DVDs, as well as frames, buttons and backgrounds. All with just a few clicks of the mouse.
