CAMEO Connect

FireWire™ Front Connection

FireWire™ Comfort Connection

Are you the owner of a FireWire™ controller with a so far "unused" internal FireWire™ connector? Do you also have to crawl under your desk, poking and fiddling in the dark until the connector fits properly. Rescue is here! With the Cameo Connect the internal FireWire™ port can easily be routed to the front of your PC. Integrated into a 5¼" metal drive bay frame, equipped with a connector for the PC power supply and the ability to install 3½" devices. Even 3½" devices using removable media can be installed due to the exchangeable faceplate.

Of course, an adequately long FireWire™ cable is included to connect your FireWire™ controller to the Cameo Connect.

Cameo Connect. Showing what you've got .

Technical Details

- 5 ¼" Front drive bay module with face plate
- Internal 6Pin IEEE-1394 FireWire™ connector
- External 6Pin IEEE-1394 FireWire™ connector
- Internal connector to PC power supply (Floppy type power connector)
